FIRST 20 FOUNDING MEMBER COMPANIES PAY $5000· 20 of 20 seats remaining · THEN THE PRICE WILL REVERT TO THE STANDARD $15,000.

BestPerformance SYSTEMS *Keeping People Healthy & Performing Their Best*

How would your manufacturing operation change if you eliminated 50% or more of your injuries?

Most Clients Cut Their Injury Costs by 50–90% — and Kept Them Down for Years.

Since 2012, 100% of the clients we've served have had fewer injuries and greater productivity.

> *Nearly every company claims to be the best, and I'm uncomfortable saying it too. It sounds salesy. So don't take my word for it. Read on, and the evidence will let you judge for yourself.*

Many companies have spent time and resources trying different programs to reduce injuries, none of which lasted long term. You are about to learn about the program that succeeds every single time!

- ☑ Until now this program has only been available live and cost over $100,000, affordable to enterprise clients.
- ☑ Today the identical program is also available digitally, run by your supervisors. Easy to implement, highly effective and non time demanding.
- ☑ For the first time this system is within reach of every manufacturer. It is only $15,000
- ☑ If you are one of the first 20 founding members to purchase this program, **your price is $5000**

CLIENTS WE'VE SERVED INCLUDE

Boeing · Pratt & Whitney · United · Air Canada · Lisi Aerospace · Genie · RadNet · Moore Industries Worldwide · UVDI · The Monadnock Company · Baldor Linear Motors · Milgard Windows · Quaker City Plating · Ram Cast

Does this sound like you?

- ☐ You've implemented safety training, and within a few months the old habits came back — and so did the injuries.
- ☐ Your supervisors are stretched thin. Safety feels like one more thing on an already busy list.
- ☐ Workers don't speak up until after they have been in pain for months, which hurt productivity — and eventually it's an expensive workers' comp claim.
- ☐ Workers' comp claims, medical and disability costs are eating into your profits.
- ☐ Chronic aches and pains are common on your floor, and they quietly drain morale and reduce productivity and final product quality
- ☐ You couldn't justify a $100,000 consulting engagement — or you already paid for one and watched it fade.

> **If you nodded at even one of these, keep reading. There is a reason it keeps happening, and there is an affordable fix that lasts — and every month you don't put in the fix is another month it costs you money you won't get back.**

It isn't your people. It's how the entire industry is addicted to traditional safety that simply does not work.

Most plants want to eliminate injuries, whether they want to save money or take care of the workers they care about.

They have been trying the same traditional approaches for years! And very little works.

Maybe a good consultant trains and motivates your workers, then leaves. For a few months injuries are down. Within two to six months, old habits return and injuries climb back. The training was a waste of time and resources. The problem is people, all of us, are addicted to our habits. So your workers return to their old habits.

Part of the solution is you must replace bad habits with good safe efficient habits. We have studied the science of habit change, and it is built into this program.

What else have they tried to reduce injuries?

- ☐ safety talks
- ☐ rewards
- ☐ Safety videos playing in the lunchroom
- ☐ and many more traditional things.
- ☐ posters
- ☐ ergonomic equipment
- ☐ Stretching program

They are all good ideas, but they do not work.

For years Best Performance did what everyone else in the safety industry does: provide great training to workers, motivate them, and leave.

It worked well enough to earn the trust of many Fortune 500 plants. But we weren't satisfied. We wanted to do better.

We saw the same thing in our clients. People eventually returned to their old habits.

And we knew we could do better.

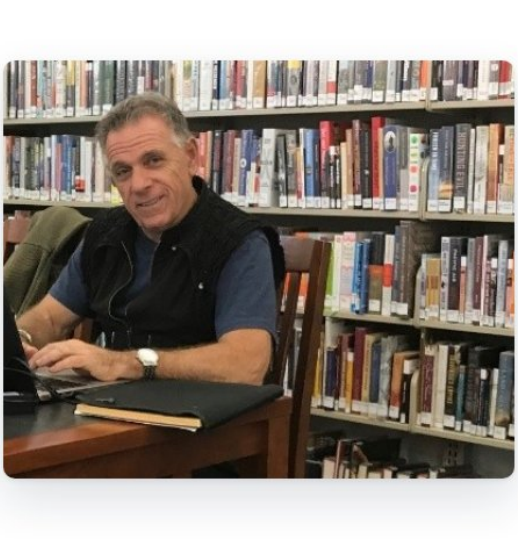
THE HERO'S QUEST

The Best Performance Systems Quest To Be the Best

In Joseph Campbell's famous story "The Hero's Journey" A hero ventures forth from the common world on a quest to find great things and powers to return and bestow upon his fellow man.

The Best Performance Team is on a quest. It is to find everything that might contribute to improve the workplace.

We are on a quest to find how to reduce or eliminate injuries, improve productivity, and have it last year after year. How to influence people to want to learn new things to feel better, to learn them, remember them, and apply them.



As a speaker to many industrial conferences, I had friends and colleagues who think the way we do and we learn from each other.

We studied Industrial psychology, How to influence human behavior, ways to create a happier work environment, systems to build real trust and communication between supervisors and their workers, Conflict prevention, systems to teach skills and influence people to make them their habits both at work and at home (you don't want your workers safely lifting heavy things at work but not at the lumber yard or their backyard), positive communication, so when your supervisors tell a worker what to do, the worker feels respected and empowered, and does it.

Most other safety programs are very good at a few things.

Best Performance integrates all that we learn (and we are still learning) to have the greatest impact on your company.

And all of this is implemented into your workforce in a 3-5 minute meeting 3 x week where your supervisors simply show a video that does the teaching, then a few minutes of your supervisor asking the team questions about what they just saw.

Then twice a week your supervisor invests a few minutes with their team sharing a leadership skill.

> Best Performance Systems is not a safety program. It is a system that influences your staff to want to and remember to do the right thing, to create a happier and more productive positive culture.

This system is why we've had 100% success since 2012, and why manufacturers invite us to speak at their conferences to share many of our proprietary techniques

Picture your plant over the next 90 days and beyond

Every day without a better system is another day your people and your profits are at risk. Here is what changes when you implement Best Performance Systems.

Timelines will vary by plant, based on each site's size, schedule, and operation.

Days 1–30

The Culture Starts to Shift

- ☑ Supervisors start the shift by pressing play on a short 3–5 minute video. Each video teaches a technique that makes workers feel better and get more done. The video does all the training.
- ☑ Supervisors learn Positive Communication. Workers feel respected and empowered and more willingly carry out supervisor requests.
- ☑ Workers start speaking up sooner about hazards, equipment problems, and early aches or pain. So the cause can be identified and corrected to prevent future problems.

Days 31–60

Safe Habits Become Daily Habits

- ☑ Workers begin to use proper body mechanics without being reminded. Injuries are down and productivity up.
- ☑ Supervisors give clearer instructions and more positive feedback, again, contributing to workers feeling respected and empowered
- ☑ The team begins problem solving because people are influenced and rewarded to openly share.
- ☑ Strains get reported early and treated before they turn into claims. Stop paying for injuries you could have prevented.

Days 61–90

The Results Show Up in Your Numbers

- ☑ Injuries and workers' compensation claims are trending down and productivity is up
- ☑ Fewer repeat incidents, because an injury triggers evaluating the cause to put prevention in place
- ☑ Less rework, less scrap, and less overtime.

Beyond 90 Days

- ☑ A safe productive positive, happier culture that runs every day as "the way we do things around here"
- ☑ Lower turnover, easier recruiting, and a stronger reputation in your community.
- ☑ Higher output per labor hour. That is how safety becomes profit.
- ☑ A self-motivated team.

The Manufacturing Supervisor Leadership Program

Most training fades within weeks. This one doesn't. It is a step-by-step, habit-changing system that your own supervisors run every day, The safe way is simply the way things are done around here.

Supervisors become effective trainers just by pressing play.

At least 3 times a week they show their team a 3-5 minute video on one technique that is used when they are working. The video is designed to influence the workers to understand why it makes them feel better . The video does all the training for the supervisor

Supervisors become effective at teaching Leadership Skills

Twice a month, the supervisors learn a new leadership skill by looking at a 15 minute video that trains them. The leadership skills are easy for the supervisor to learn, implement and maintain with their teams. They are designed to be fun for the workers and they have powerful effects on the teams performance.

Supervisors learn to recognize and reward workers who are "caught" using safe habits.

They give a reward to any worker they see doing a stretch, lifting, pushing or pulling properly, or helping another worker. Workers feel good because they were complimented, and they are influenced to do good things when there is no supervisor around.

The way you impact peoples behavior when you are not around, is by the way you treat them when you are around.

> **The Best stretching program**
>
> Every worker is taught a stretching routine. Each stretch is designed to reduce tension, ache or fatigue, in one part of the body and create more energy to make work easier. They are asked to perform one 3 breath stretch twice per hour. They choose which stretch to do based on how they feel at the moment. Since 2012, most workers are still doing them for years. Why? Because they feel better.

What Happens to the business if this system is implemented?

Outcome 1

Fewer injuries, for years, not months

What it means for you:

Lower workers' comp costs, fewer lost time days due to injury, less overtime and less paperwork. Most of our clients saw their injury costs fall 50–90%, and the results lasted for years.

Outcome 2

Workers who are happier, communicate better with their supervisors, and like working there

What it means for you:

Safe habits stick because workers actually feel better. Supervisors and crews trust each other. This is an important missing piece in many plants: regardless of how good the information is, workers only use it when they feel they are respected and empowered by their supervisors. This system builds trust and eliminates the frustrations that many supervisors have of workers that cooperate less than ideally when they are asked to do something

Outcome 3

The workers get more done with the same effort, so productivity improves

What it means for you:

Safer technique feels better, is more efficient and takes less effort, so workers get more done in the same amount of time. Working more efficient and having more strength and endurance means less rework and waste. One client was surprised by multi-million-dollar savings from reduced waste and rework alone.

Who is this program for? manufacturers who want to have significantly reduced injury costs, greater productivity, less mistakes and waste, a more positive company culture, and who want lasting results daily year after year

Reserve Your Founding Member Seat and save $10,000 →

A better day for everyone in the plant

Workers

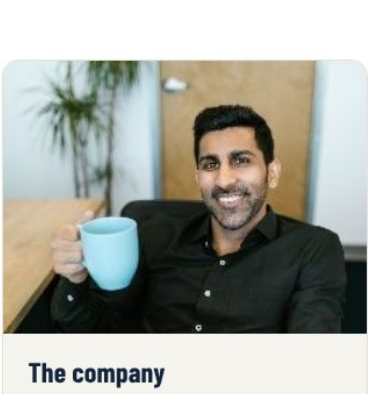
They have less aches, tension and fatigue, get more done with the same effort, and go home with more energy for friends and family — instead of collapsing on the couch, exhausted.

Supervisors

Less stress because they have a better-performing department, with simple daily tools and easy-to-apply leadership skills that take the guesswork out of leading.

HR and safety leaders

Fewer injuries, fewer claims and less paperwork.



The company

A more profitable plant: lower injury costs, less waste and rework, greater productivity, and a workforce that wants to be there.

Everything your plant needs, in the order you'll use it

1 Pre-assessment survey

The supervisors and workers learn to easily pinpoint the cause of stress and injury even before there is a problem. The best way to treat an injury is to prevent it. And if an injury occurs, they have the skills to figure out why and prevent it from happening in the future.

Why it matters to you

Builds buy-in before training starts, and empowers your staff to solve problems themselves.

2 Supervisor training

They learn leadership skills that are simple to learn, implement and maintain. These practical skills build teamwork, empower workers to improve procedures in their department, reduce conflict, influences their team to feel respected, empowered and wanting to do the best job they can.

Leaders learn to recognize and reward workers "caught" using safe habits.

Why it matters to you

Supervisors become leaders who bring out their team's best — trusted and followed, not just obeyed.

3 Worker training

Workers learn to adjust equipment and technique to have less stress and injuries, feel better and get more done with the same effort.

Why it matters to you

Fewer injuries and greater productivity. Workers do it because they actually feel better and go home with more energy for friends and family. That is important to the workers.

4 Daily reinforcement

Interactive 3–5 minute video lessons 3 times per week or more. Supervisors just press play and the video does the training in groups or one-to-one on a smartphone.

Why it matters to you

Habits stay alive after the training ends. daily, year after year. This is what most programs are missing.

Plus the support that makes it stick

- ☑ Monthly Zoom meetings with your supervisors to help solve challenges and build confidence and provide new skills.
- ☑ Two private consulting calls with a Best Performance consultant in your first 90 days.
- ☑ Unlimited email support for your supervisors' questions and to solve challenges. We want every client to succeed.
- ☑ Every update and addition to the program during your 12-month license — a new skill to apply every month.
- ☑ Consulting days can be purchased to have a Best Performance consultant on your site to evaluate and solve challenges, assist with implementation, provide additional training, etc.

What it takes from you: the program works when your leaders use it consistently — short worker videos 3–5 times per week, and leadership training twice a month.

Meet Dr. Barry Carlin

Dr. Carlin has helped teams perform at their best under pressure, from Cirque du Soleil and the Joffrey Ballet to major manufacturers like Boeing and Pratt & Whitney. He is a sought-after keynote speaker at PIHRA, AeroDef, ASQ and ErgoTech and others.

His method turns supervisors from managers into leaders that workers trust and follow, and that is why the results are so profound and last. Since 2012, Best Performance Systems has done one thing; help manufacturers reduce injuries, be more productive and develop more positive cultures.

When you join, you also get our support team: experienced trainers and project managers who will help you get started, solve challenges and answer your supervisors' questions.

Results our clients have measured

> We reduced work comp costs in one year from $3 million to $1.3 million, a $1.7 million saving, sustained over several years. We were quite surprised at the unexpected multi-million-dollar savings in reduced waste and rework directly from influencing the staff to use efficient habits.
>
> **Joanne Bielawski**
> Workers Comp Administrator, High Precision Aerospace

> Injuries dropped from $2M to $900K a year, and workers now help each other to be safer and more productive. We never thought we'd see people helping each other on the production floor.
>
> **Jose Gonzalez**
> Production Manager, Genie Lift Corp.

> Six months without a single injury — the first time ever.
>
> **Richard Kandell**
> HR Manager, Marconi Astronics

> Workers are actively changing technique to be safer and feel better. I never believed it was possible.
>
> **John Tyrone**
> Production Manager, The Boeing Company

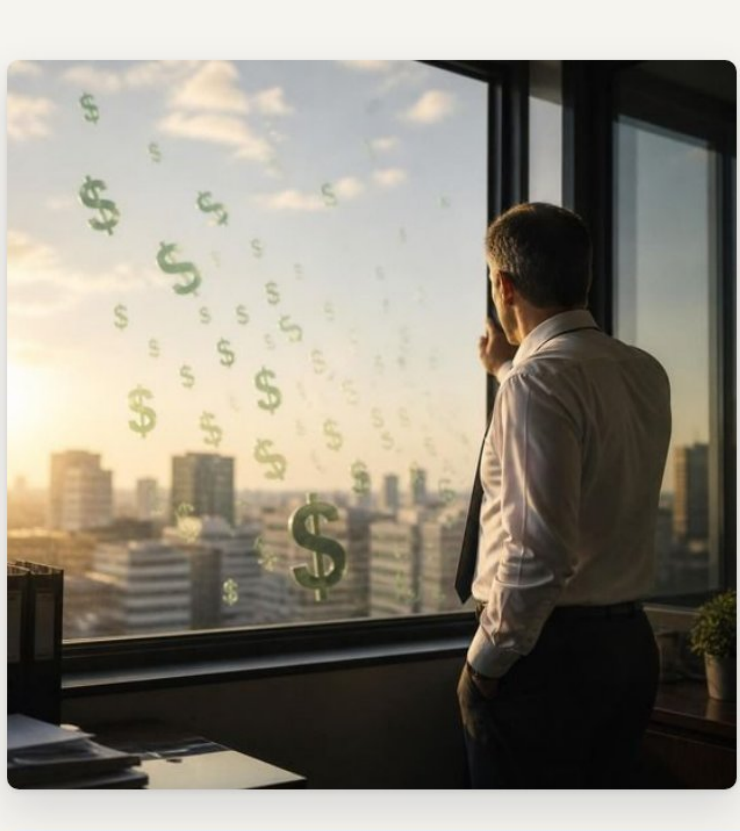
Most safety programs train your workers and leave. We build a system that stays.

	Most safety programs	Best Performance Systems
Who does the work	An outside consultant trains your workers, then leaves and the workers and supervisors are on their own.	Your own supervisors lead it every day, every shift. Your supervisors teach a "Best" working technique 3 times a week, implement a leadership skill 2 times a month,using behavior modification short videos.Throughout every day supervisors look to catch workers using good technique and reward them
What it changes	Provide good training and leave your workers and supervisors to remember to use it. The reality is people are addicted to their habits, and because there is no system to change habits, most people return to their old habits.	A system for the supervisors to effortlessly provide high quality training in just a few minutes, a few times per week,as well as leadership skills, and promote a happy respectful workplace. Workers are reminded of the best skills in little bites which eventually become unconscious "Habits" which they use daily at work and at home
Why workers follow it	They are told what to do.	They do it because they are reminded on a regular basis and they actually feel better when using the Best Performance techniques.
What happens next	Old habits and injuries come back in 2–6 months.	Results that last for years.
What it costs	Often five- or six-figure engagements.	The digital program and ongoing support cost $15,000. The first 20 Founding Members pay only $5000 in full.



What does one injury really cost you?

The National Safety Council estimates that the average work injury requiring medical care costs $48,000, counting wage losses, medical expenses, disability costs, administrative expenses and employer costs. That's before overtime to cover the gap, slower output, rework, and a crew that trusts the job a little less because they see their colleagues getting injured.

The Best Performance Program costs $15,000. (And only $5000 if you are one of the 20 Founding Members) Prevent one injury and the program has paid for itself, and you will prevent far more than one.

> "Every client we have worked with has reduced injuries, most with a 50 to 90% reduction in injury costs. That is why the Best Performance Systems program is an investment, not an expense, which pays for itself over and over."

Pay securely by Stripe, PayPal, or ACH bank payment. All options are on the checkout page.

Access lasts 12 months. After that, renew for $3,000 a year. Your renewal is free if you refer another company that buys Best Performance.

What Founding Members agree to

We're offering this price to 20 companies who will help us make the program even better. In return, we ask three simple things:

Use the program.
It works when your leaders use it consistently.

Tell us what you think.
If the program helps your company, we'd be glad to have a short testimonial, if you want to give one.

Share your suggestions.
If you see a way to improve the program, let us know. We're always striving to be better.

Additional Services

AVAILABLE TO BEST PERFORMANCE SYSTEMS CLIENTS

Supervisor Seminar: A Full Day with Dr. Carlin at Your Plant

Your supervisors set the tone on your production floor. This is the day they go from knowing the program to using it with confidence. Dr. Carlin comes to your plant and leads an 8-hour, hands-on seminar built around practice and role-play, not lectures. Your supervisors leave motivated, because they experience the value for themselves and see what it does for their workers.

What your supervisors will do:

- ☑ Learn to spot safe ergonomics and good work habits, and how to recognize and reward them
- ☑ Practice running the 3-to-5-minute training videos and leading the conversation afterward so workers truly understand
- ☑ Build their leadership skills through guided practice
- ☑ Strengthen their presentation skills by working together as a group
- ☑ Learn how to teach workers self-evaluation and self-care, so they can reduce their own discomfort on the job

What they take with them:

- ☑ Supportive handouts
- ☑ Full access to the Best Performance Systems website, which contains everything they learned and is the tool they will use on the production floor

Details: Up to 25 supervisors in one full-day class.
Investment: $5,000 plus expenses (travel, lodging, and a reasonable per diem)

AVAILABLE TO ANY MANUFACTURER

On-Site Risk Evaluation and Written Report

The most common cause of injury, pain, and lost productivity in manufacturing is also the easiest to miss: poor posture while working. It looks harmless, and it costs plants a great deal. Dr. Carlin comes to your facility to find it, along with the other risks hiding in your equipment, ergonomics, procedures, and worker habits.

How it works:

1. **Before the visit:** Your workforce completes an anonymous survey. It reveals what people won't always say out loud, and it prepares them for Dr. Carlin's visit.
2. **During the visit:** Dr. Carlin walks your floor with a well-liked, respected worker or supervisor and talks with people in many short, informal interviews.
3. **After the visit:** You receive a written report organized by department. For each department, it lists the risks observed, the problems they can cause, and practical solutions, both purchased and, when possible, low-cost ones you can make yourselves.
4. **Support afterward:** Dr. Carlin is available to speak with whoever is making the physical corrections.

Investment: $5,000 plus expenses (travel, lodging, and a reasonable per diem)

SOFT SKILLS WORKSHOPS

Soft Skills Curriculum

Great plants run on more than machines and procedures. They run on how well people work together. Poor communication, unresolved conflict, and resistance to change quietly drain efficiency. Trust, mentoring, and positive communication restore it. Our behavior-based workshops make new habits stick, and two months of follow-up materials, assignments, and support keep results going after training ends. Pick a workshop and get the best from your people and your plant.

See the full list of workshops →

01 Presentation Skills
02 Handling Conflict Thru A Non-Confrontational Resolution Process
03 Influencing and Motivating Worker Behavior
04 Supervisor Skill of "Trust"
05 Supervisor Skill: Quit & Stayed
06 Coaching For Work Performance

BEST PERFORMANCE SYSTEMS

Our Commitment to You

Since 2012, we have helped manufacturers reduce injuries, improve productivity, and build a more positive workplace. **Every client we have worked with had reduced injuries, most with a 50–90% reduction in injury costs.**

That's because this is not a library of information. It is a simple system, and it works when it is put into practice. We will help you put it into practice.

HERE IS OUR PROMISE

1. **Your first 2 months**
Follow the Getting Started plan. You should begin to see the early results described there. If it is too early to see injury reductions, you will see workers feeling better, improvements in production and waste, positive supervisor feedback, and fewer near-misses.
2. **If you don't see these results**
We won't leave you on your own. We will assign a Best Performance consultant to work closely with your key people for 2 more months, at no extra charge.
3. **If you have followed the system and still don't see the early results above**
You can request a full refund. Following the system means showing the worker training videos at least 3 times a week and holding the leadership sessions at least twice a month.

You are not buying a library of videos.
You are gaining a system and a partner committed to your success.

To request a refund, email support@BestPerformanceSystems.com within 14 days after the 4-month period. Eligibility is based on the training and leadership-session activity recorded in your program account.

If you are not certain if you want to purchase this program, or if you just want to feel better, Get the Free At-Home Routine to Reduce or Eliminate Neck, Shoulder and Upper Back Tension

Neck shoulder and upper back pain and tension are among the most common complaints in any workplace, in fact everywhere in society. At first this routine will make you feel better but if you continue it for several months it will eliminate the neck shoulder and upper back pain and tension permanently. This simple home routine is something anyone can do to relieve them. Share it with your whole crew, and encourage them to share it with their friends and family, too.

You get more upper body endurance so you get more work done but you also perform better at everything in life, even sports. Experience how much better you can feel by your own efforts.

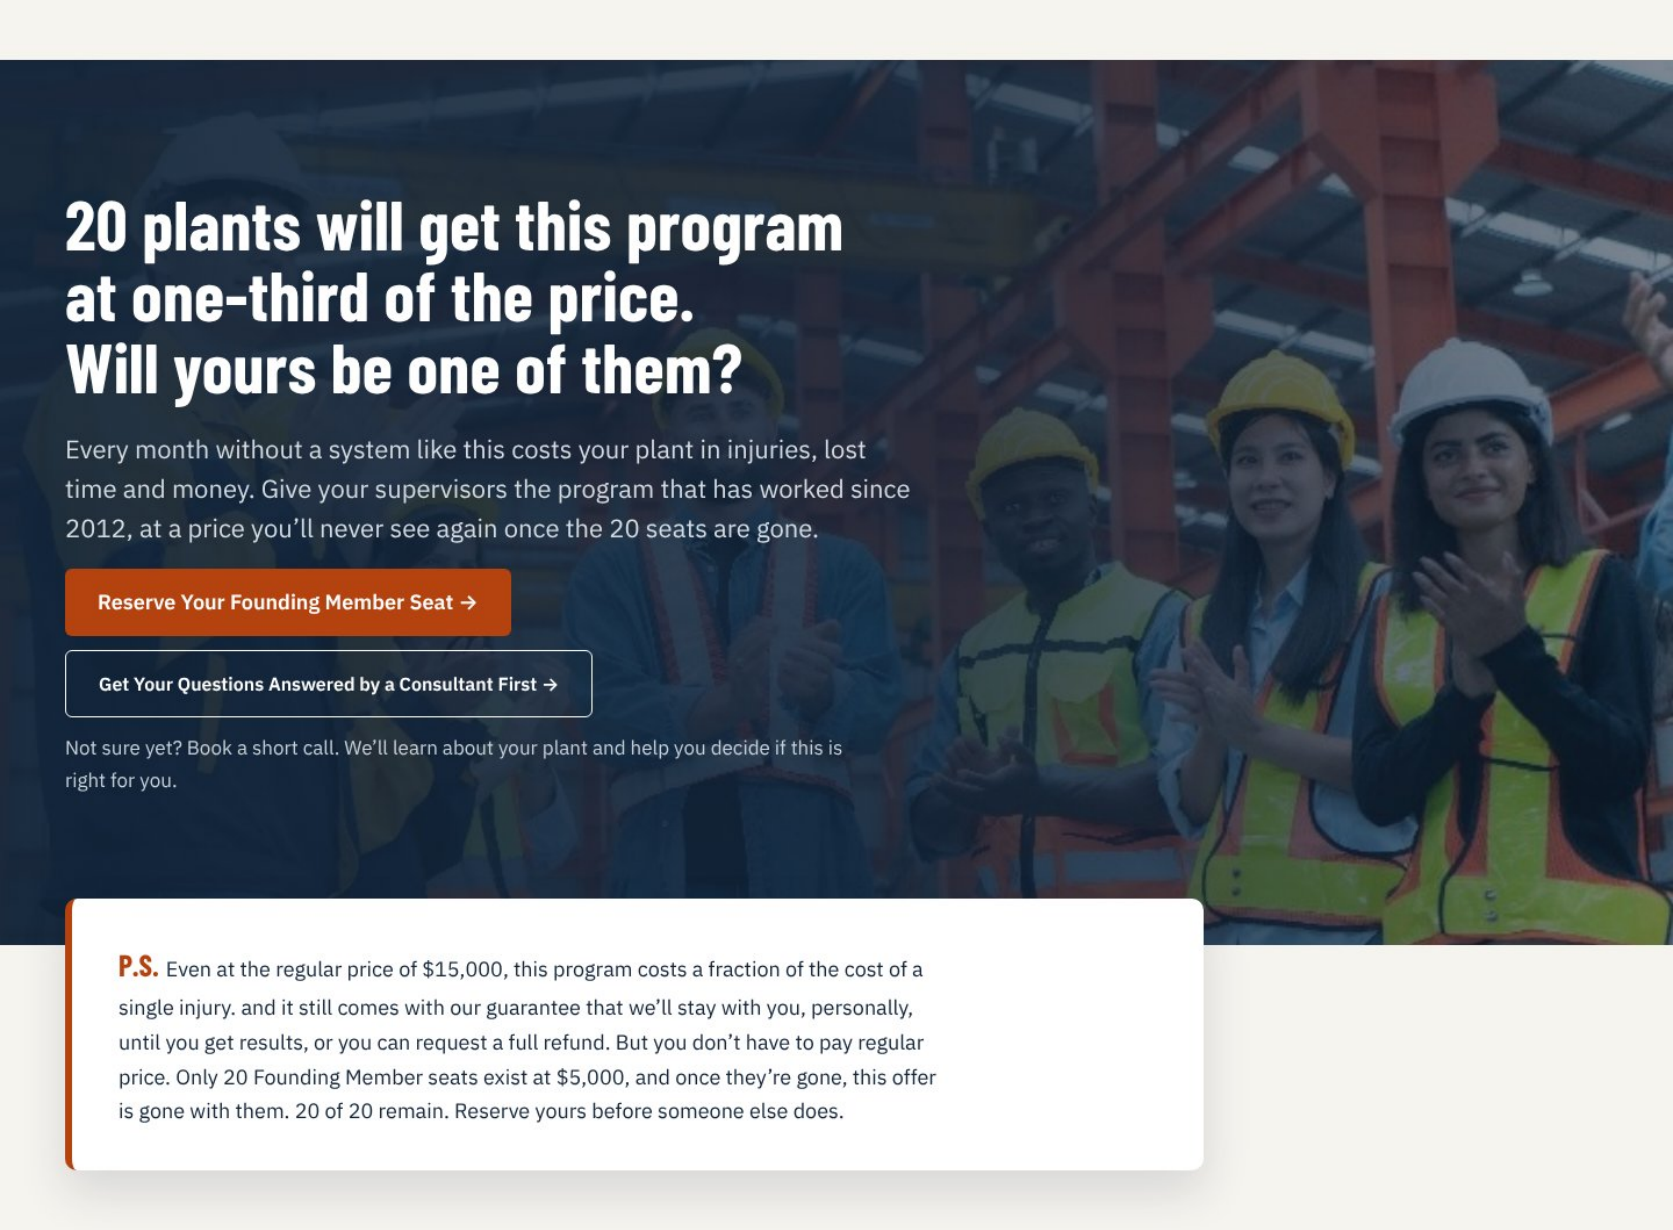
Common questions

- What do I get for $5,000?
- Is it really the same as your $100,000 program that has had 100% success since 2012?
- Why is it only $5,000?
- What happens when the 20 seats are gone?
- Who uses the program at our plant?
- How much time does it take?
- How long do we have access, and what does renewal cost?
- What if we don't get the results we want?
- What is the soft skills seminar?
- Is there anything else available?
- How do I pay?
- What happens after I pay?
- Can I talk to someone before I decide?



20 plants will get this program at one-third of the price. Will yours be one of them?

Every month without a system like this costs your plant in injuries, lost time and money. Give your supervisors the program that has worked since 2012, at a price you'll never see again once the 20 seats are gone.

Reserve Your Founding Member Seat →

Get Your Questions Answered by a Consultant First →

Not sure yet? Book a short call. We'll learn about your plant and help you decide if this is right for you.

> **P.S.** Even at the regular price of $15,000, this program costs a fraction of the cost of a single injury. and it still comes with our guarantee that we'll stay with you, personally, until you get results, or you can request a full refund. But you don't have to pay regular price. Only 20 Founding Member seats exist at $5,000, and once they're gone, this offer is gone with them. 20 of 20 remain. Reserve yours before someone else does.
