WELCOME TO THE LIVE PAIN FREE SYSTEM: Your Final Solution to End Chronic Pain!

Dear Friend,

I have been dedicated to a personal mission for over 20 years: to empower people to treat themselves, to lead a higher quality life, and to not be dependent on doctors.

The culmination of that mission is Live Pain Free!

Patients would come to me for treatment to fix a problem, but I discovered something far more powerful: I developed a unique system that was customized for each patient that would teach them to keep the problem from returning. Many colleagues ridiculed me: empowering patients to heal themselves meant that they would come back less often to my office, which would hurt my business. But my patients thrived, resolving painful conditions that had plagued them for years.

I evolved to teaching seminars on how to treat yourself, to stop pain now, to prevent future problems, and to improve performance.

This was so effective, I was asked to work with Cirque Du Soliel, Joffrey Ballet, symphony orchestras, rock bands, stunt organizations, major hotel chains, United Airlines and Boeing. I was empowering thousands!

Now, with Live Pain Free, I am sharing this system with you. This is not a bunch of quick-fix tips! This is a system that will radically transform the relationship you have with your body. It doesn't matter if you're a professional athlete, performer, just want to pick up your grandkids, or maintain your independence as you age - you will feel and perform better than you ever felt possible, and maintain it for life.

You will no longer need to spend your valuable time and money on doctors. Instead, you can self-diagnose and treat yourself. Not only will this help to stop the pain, but you'll feel healthier, and you'll be able to do the activities in life you love most.

Now, go out and live pain free! Teach what you learn in Live Pain Free to your spouse, your children, your friends so they can be pain free too!

Dr. Barry Carlin

Learn to say goodbye to pain and hello to a more vibrant life!

NECK-SHOULDER-UPPER BACK TENSION, CRAMPING & PAIN: A Common Problem & Permanent Solution

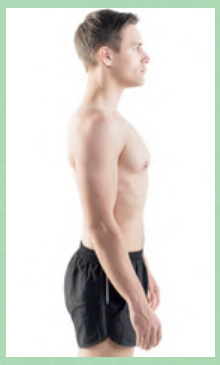

This training is my gift to you! It is one part of the Live Pain Free system that addresses every pain in your body.

Are you tired of being one of the 80-90% of adults who suffer from chronic neck, shoulder, and upper back tension and pain? Well, it's time to take control, and learn to permanently eliminate this pain.

It doesn't matter if you are athletic, a professional dancer or circus performer, or just want to be able to tend your own garden or carry your own groceries.

If this training is all you do, you will feel and function better than you have in years!

Picture this: World-class athletes, in golf, tennis, football, soccer, and basketball, all share one secret – neutral shoulder positioning. This is the result of balanced shoulder strength between the chest and upper back.

Now, look around you. Notice how most people's shoulders lean forward, because their chest muscles are stronger than their upper back muscles.

This strength imbalance leads to:

- Chronic tension, pain and discomfort.
- The tight muscles pull the bones they attach to out of place, pinching nerves.
- Your arms tire easily when performing a task.
- Extra wear and tear on joints leading to conditions like arthritis.

Many people seek relief through doctor visits, chiropractic, yoga, massage, acupuncture, medication, and even surgery. It all gives relief, but the pain returns. And you treat it again. As the years pass, the pain comes more often, lasts longer, and restricts more activities. Eventually you have chronic pain!

The permanent solution is simpler than you think!

Many doctors and therapists offer a one-size-fits-all solution, but every person is unique. That's where Live Pain Free comes in. Our system empowers you to self-diagnose your unique needs, and then to customize your self-treatment for maximum, permanent relief. Picture a life where you wake up feeling invigorated, with a body that's free from pain.

NECK-SHOULDER-UPPER BACK TENSION, CRAMPING & PAIN: A Common Problem & Permanent Solution

The Permanent Solution: The key is to have a balanced upper body by giving yourself therapy to relax tension and contracture in the specific muscles that are tightest on you, while strengthening the three muscles that pull the shoulders back into a neutral posture. The entire self diagnosis and self-treatment program can be done in your own home or gym.

You don't need to spend your valuable time or money with doctors and therapists!

STEP 1: CUSTOMIZED SELF-DIAGNOSTIC STRETCHING ROUTINE

This is a complete upper body stretching routine which you do only once per week to self-diagnose which muscles are tightest. Then those tight muscles are your daily stretching routine for the next week.

A week later you do the entire routine again. Choose the muscles that are now the tightest, and they become your daily routine for the next week.

You're essentially diagnosing and re-customizing your therapy each week, getting the maximum benefit with the minimal time and effort.

STEP 2: UPPER BACK STRENGTHENING ROUTINE

This takes just 2 minutes, three times a week, to strengthen the three key muscles that pull your shoulders into the healthy, neutral position. In as little as 6-12 weeks (depending on how quickly you develop muscle strength, you'll correct the strength imbalance, permanently eliminating neck, shoulder, and upper back tension.

Everything you need to do is included in the following pages.

Your results:

- Less tension (or no tension) and pain in your neck, upper back and shoulders.
- Reduced chance of muscle injury (tight muscles can tear very easily).
- Reduced chance of spinal injury, pinched nerves, pain and future arthritis.
- Stronger arms with 5-10 times the endurance and performance.

All it takes is a little investment in yourself.

Hundreds of performers in Cirque Du Soliel and the Joffrey Ballet are doing this exact routine. Why? Because they feel and perform better with fewer injuries.

When you discover how much better your neck, shoulders, and upper back feel, I invite you to explore the entire Live Pain Free program!

CUSTOMIZED SELF-DIAGNOSTIC STRETCHING ROUTINE

This is a unique and superior way to get the most out of your stretching to improve the functioning of your body.

The rules of Live Pain Free stretching for maximum health:

1. Once a week do the entire routine to self diagnose where you need to stretch. Move around trying each stretch in at least 3 positions, so you can find the tightest position.
  a. You now have learned which are your tightest muscles. They will be your daily custom stretching routine for the next week.

2. Hold each tight position for 3-5 deep, slow relaxing breaths.
  a. Gently go a little deeper into the stretch with each exhalation.
  b. Hold it steady, with no bouncing.

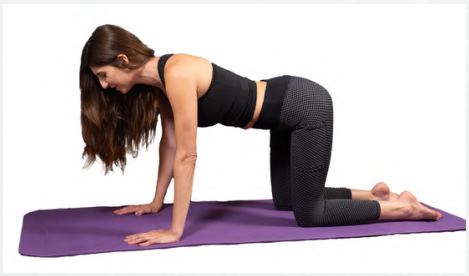

3. Do this 1-3 times daily until you cannot find the tight spot.

4. After one week, do the entire routine again to self-diagnose which are now your tightest muscles.
  a. These become your daily customized routine for the next week.

You're essentially diagnosing and re-customizing your therapy each week, getting the maximum benefit with the minimal time and effort.

CUSTOMIZED SELF-DIAGNOSTIC STRETCHING ROUTINE

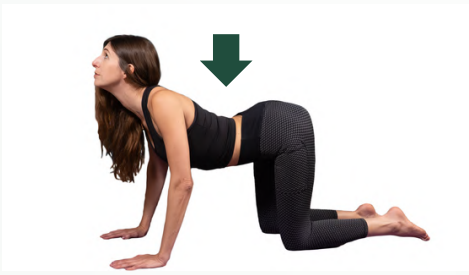

1. Cat / Cow

- Start in Table Pose on all fours.
- Hands shoulder width apart.
- Knees hip width apart.

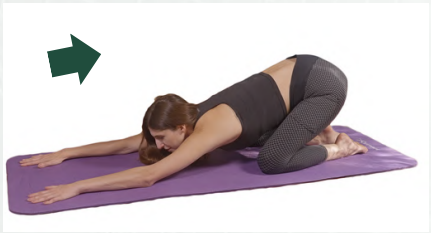

- Arch back high.
- bend chin towards chest.

- Arch belly toward floor, head bends back.
- Perform 5 sets of cat-cow.

2. Child's Pose Pull Back

- Start in table pose.
- Reach out with hands on ground far in front of you.
- Sit back gently onto your heels.
- Try to reach out further.
- Lean back to feel a shoulder arm stretch.

- Pull back straight.
- Pull back to the right.
- Pull back to the left.
- Hold whichever position was tightest for 3 slow breaths.
- Can try with one arm out only to increase the stretch.

3. Cross Chest Stretch

- Grasp elbow and pull arm across chest.

- Pull across chest in 3 positions, low, middle, high.
- Hold whichever is tightest.

CUSTOMIZED SELF-DIAGNOSTIC STRETCHING ROUTINE

4. Tricep Stretch - One arm overhead

- Hold one elbow behind your head with the other hand.
- Pull the elbow behind head and down.
- Do both sides.
- If one side is tighter do an extra set each day until they are equal.

5. Tricep stretch - Two arms overhead

- Grasp both elbows above your head.
- Bend to the right and left.
- Hold any tight position.
- If one side is tighter, do an extra set on that side each day until they are equal.

6. Arms Out Palms Face In

- Interlace fingers, arms straight in front at shoulder height.
- Palms face you.
- Try straight, to the right, to the left.
- Hold tightest position.

7. Arms Out Palms Away

- Palms face away.
- Push straight out, to the right, to the left.
- Hold the tightest position.

8. Arms Up Palms to Sky

- Interlace fingers, palms face up.
- Push straight up, reach to the right, reach to the left, hold the tightest position.

9. Neck Stretch Arms Behind

- Place right arm behind your back.
- Grasp right wrist with left hand.
- Pull right arm down and to the side as you bend your-neck away from arm being pulled.
- Pull with neck bent forward and to the side, in the middle and to the side, back and to the side, hold tightest spot.
- Switch sides.

10. Chest & Shoulder Extension

- Clasp hands behind back, straighten arms
- Simultaneously raise arms in back and chest in front.
- Change arm position to find tightest tissues.

11. Doorway Chest Stretch

- Hold onto the door jambs with arms at comfortable height.
- Feet staggered.
- Chest up.
- Lean forward.

Then stretch with body twisted to the right, then the left to find the tightest muscles.

Advanced technique:
Place arms higher on the door jamb and perform the 3 position stretching routine.

12. Chin Tuck

The Chin Tuck is the most valuable neck stretch. Most people immediately feel less tension, pain and more movement. If a spinal disc is bulging and touching a nerve, it moves the disc away from the nerve.

- Push on the front of your chin toward the rear.
- Do not look up or down.
- Look straight ahead as you push back as far as you can.
- Take 3 deep slow breaths.
- Push a little deeper into the stretch with each exhalation.

UPPER BACK STRENGTHENING ROUTINE

GOAL: Creating Strength Balance Between The Chest And Upper Back.

Along with the combination of customized stretching and consistently avoiding a slouching posture, this strengthening routine is the final component of the system that permanently eliminates neck, shoulder and upper back pain and tension.

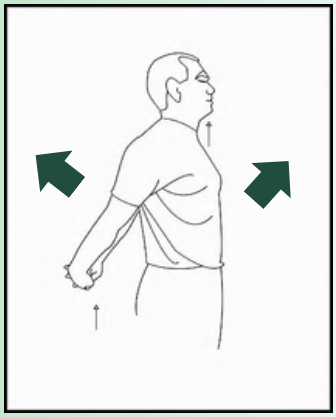

This is a 2 minute routine, performed three to four times per week.

STEP 1: PREPARE YOUR BODY FOR EXERCISE TO PREVENT INJURY

Slowly roll shoulders In 3 big circles forward, then 3 circles backward.

Hold your hands, straighten your arms, raise your arms in back and chest in front simultaneously. Hold For 3 Breaths.

STEP 2: PROPER TECHNIQUE

1. Stand with chest up.

2. Feet Staggered.

3. Pull the tubing at home or the wall mounted pulleys in your gym slowly.

a. Action is pulling the shoulder blades together.

b. 3-5 count pull.

c. 3-5 count hold, pinching the shoulder blades together.

d. 3-5 count return.

e. That was one repetition.

4. Muscle should feel moderately fatigued after 12 repetitions.

a. If you can easily keep going, next time increase the resistance by pulling further away, use stronger tubing, or more weight in the gym.

b. If it is difficult to finish, next time decrease the resistance by moving closer to the tubing attachment, use a weaker tubing, or less weight in the gym.

UPPER BACK STRENGTHENING ROUTINE

STEP 3: STRENGTHENING EXERCISES

12 Repetitions

1. Arms are straight, close to shoulder level, thumbs point away from each other, chest is up, Action is pinching the shoulder blades together.

12 Repetitions

2. Arms are straight, close to shoulder level, thumbs point towards each other, chest is up, action is pinching the shoulder blades together.

12 Repetitions

3. Stand with the wall to your side. Hold the tubing with the arm farthest from where it is attached.

- **a.** Keep your elbow firmly against your side. Do not let your elbow leave your side.
- **b.** Start pulling with the hand holding the tubing against your body.
- **c.** Rotate the arm out as far as you can.
